Reducing our Carbon Footprint: HOME ENERGY CONSERVATION A Free Workshop, Open to the Public

Eden Mills, September 12, 2008...The Eden Mills Going Carbon Neutral project announces a free two-hour public workshop on Saturday, September 27: **Home Energy Conservation**.

By the end of September most of us begin to think about preparing our homes for winter. This timely, information-packed workshop is organized by Charles Simon of the Eden Mills Going Carbon Neutral project.

“Improving your home’s energy efficiency is one of the best investments you can make.....home insulation is better than just about any other low-risk, long-term investment ”

Natural Resources Canada, Keeping The Heat In

- Learn ways to cut carbon emissions while cutting costs.
- Review what last year’s Household Survey told us about the Eden Mills carbon footprint.
- Hear what a couple of star conservation neighbours have achieved.
- What measures make the most sense?
- Where to start, how to prioritise?
- How to develop a long-term plan?
- Ask about particular concerns.
- Find out what government grants are available.

Some measures cost nothing. Some cost a moderate amount. And you might consider other bigger ticket items only when your old ones are crying out to be replaced. There is always something you can do to lower your energy costs and your CO2 emissions.

www.goingcarbonneutral.ca

A project of the Eden Mills Millpond Conservation Association Inc.

This is the third in what is an ongoing series of information sessions designed to help citizens make informed decisions about making changes designed to reduce the production of green house gases, and to build a carbon neutral lifestyle.

27th. September 2008
10:00am - Noon
Eden Mills Community Hall
Admission is free.
